Gravel ring as retention for roof gravel

Efficient, adaptable and durable - ringo® is a robust ring made of PVC that has been specially developed to safely retain roof gravel. With ringo®, storing and transporting gravel rings is child's play, as it saves space and is easy to handle.

The straight profile is simply formed into a circle by hand on site and joined with two rivets. This creates a perfect ring shape and reliable gravel retention. The horizontal tab of the ring is weighted down by substrate or round gravel to ensure stable and secure positioning.

The gravel ring made of robust PVC efficiently retains the roof gravel.

- ✓ Space-saving for storage and transport
- ✓ Adaptable in shape
- ✓ durable and inexpensive

The profile is formed on site and joined with two rivets.

Technical details:

- Ring diameter: 356 mm
- Height: 80 mm
- Delivery condition: Angle profile 80x25 mm, length 1160 mm (other lengths available on request)
- Slot opening: 8 mm
- Material: Weatherproof PVC
- Colour: Grey

Space-saving for storage & transport: ringo® is supplied as a straight profile.
